MANY SWAP

ManySwap is powered by the amazing technology of Binance Smartchain and is going to radically change the way we interact with money.

MANYSWAP is new generation of Automated Market Making (AMM) decentralised Exchange with affiliate system on revolutionary Binance Smart Chain. ManySwap enables the user to swap tokens and to create a new liquidity pair. By adding to the LP pair users can earn LP token and LP fees. On referring user can earn 0.1% of trading fees. Also Stake your LP tokens in the farm and earn rewards.

What we are trying to do is create a perpetual deflation token, the MANY, that allows a constant price pump with a sufficient burn mechanism. We are not trying to replace the swap & exchange but to add value into the BSC eco-system and create a suitable and sustainable environment for people to yield farm with higher APR.

Manyswap is Innovative, fast, cheap, and anyone can use it.

MANY SWAP

Swap/trade

The exchange is an automated market maker ("AMM") that allows two tokens to be exchanged on the Binance Smart Chain. And also trader can invite unlimited partners using their affiliate link to earn trading fees.

Farm, Stake & Earn

On top of that, you can earn MANY with yield farms, and earn even more MANY tokens with StaFi (Staking Finance) Pools.

Play & Win

Win big with the Many Lottery!

What is MANY

$MANY is a native governance token, holders have the power to influence decisions concerning the core protocol, product or feature roadmap, hiring and staffing, and changes to governance parameters in future.

What is sMANY

It's a Digital form of ManySwap Shares. Supply is very limited & 50% of Treasury funds will be pegged into this.

MANY SWAP

Ticker: MANY
Token address: 0x2dd6c9c5bcd16816226542688788932c6e79a600
Chain: Binance Smart Chain (BEP-20)
Supply: Unlimited

Emission Rate:
5 MANY/block;
14,4000 MANY/day;

WHY BINANCE SMART CHAIN (BSC)?

In very simple terms, why would we want to drive a slower car that costs more to run? We're all about gamification, so we want to maximize the feedback loop of earning, staking, and earning again: BSC's superior speed and much (much much) lower transaction fees let us do this.

Now BSC have the level of adoption Ethereum does at current, we believe in Binance's ability, it makes sures all the transcations Faster & Cheaper. Let's make some MANY.

MANY
SWAP

"Lets us share our Plan of Action"

It's not actually a roadmap: it's a plan of action & a to-do list, in no particular order, with no particular timeline. This is how we work: as fast as we can, on the things we can. Pivoting is a way of life.

🎯 High Priority

Smart Contract audit

Certik is auditing $MANY

Insurance (To Protect the Community fund)

We Initiated with **CertikShield,** its a decentralized on-chain pool to reimburse lost or stolen assets. As a decentralized pool of risk-sharing, **CertiKShield** is an innovative alternative to insurance for reimbursement of crypto assets.

Burning Mechanism :

   100k Manual Burning Everyday till Lottery Launched

   4% Deposit fee from StaFi Pool will be used to buy back MANY & will be Burned.

MANY SWAP

⌖ Moderate Priority

🐌 Moderate Priority

· **Lottery** (core feature)

· **Analytics** (core feature)

· **Voting** (core feature)

· **IFO (Initial Farm Offering):** Raise funds for your project in MANY-BNB LP tokens.
  After redeeming the LP tokens, the BNB is distributed to the project and the MANY is burned.

· **NFT Ecosystem:** Valuable NFT & Marketplace

· **Voting :** MANY governance by community

MANY SWAP

EXCHANGE

Token swaps on ManySwap are a simple way to trade one BEP-20 token for another via automated liquidity pools.

The liquidity provided to the exchange comes from Liquidity Providers ("LPs") who stake their tokens in "Pools". In exchange, they get FLIP (ManySwap Liquidity Provider) tokens, which can also be staked to earn MANY tokens in the "farm".

When you make a token swap (trade) on the exchange you will pay a 0.3% trading fee, which is get distributed as follows:

0.1% - Returned to liquidity pools in the form of a fee reward for liquidity providers.

0.1% - Sent to the Affiliate Sponsor.

0.1% - Sent to the ManySwap Treasury.

FARMS

Initial Liquidity Pools (LPs) for farming MANY tokens:

HOW TO YIELD FARM ON MANYSWAP

1. Go to the farm page https://manyswap.io/farms

2. Connect your Binance Smart Chain Wallet (top-right hand corner)
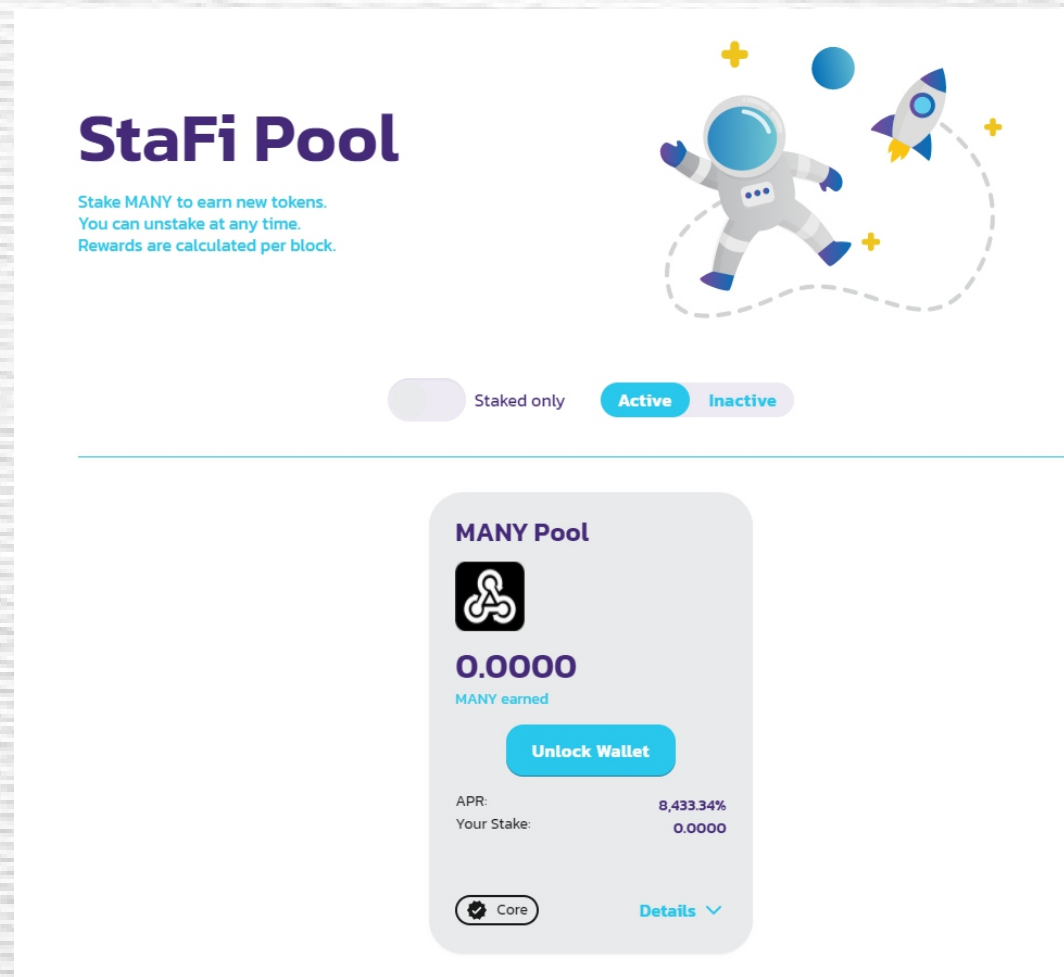

3. Pick which farm you want to use. For this example, we will pick the MANY-BNB farm.

4. Go to the exchange page https://exchange.manyswap.io/ and click "Pool" and then "Add Liquidity".

5. Select the tokens to add, in this case BNB and MANY. aYou need to provide them in a 50/50 ratio vs USD value. For example, you would need to add $10 of BNB and $10 of MANY. Once you are done, click "Supply".

6. Check the details, click "Confirm Supply" and then confirm the transaction in your wallet.

7. You now have liquidity tokens. Next, go back to the farm page https://manyswap.io/farms

8. Click "Select" on the farm you want to use.

9. Click the "+" button to stake your liquidity tokens.

10. Enter the number of liquidity tokens you want to stake and click "Confirm".

11. Done! Now you are farming MANY tokens!

MANY SWAP

StaFi (STAKING FINANCE)

It's a Mono-pool. Where new tokens meet the ManySwap community!

StaFi Pools allow Binance Smart Chain projects to bootstrap adoption by distributing a portion of their tokens to MANY token holders. Also earn partner tokens by stacking MANY.

WE REMOVED RUGPULL MIGRATOR CODE

Every one knows Pancakeswap can take all your money within 6 hours. Although they might not do it, the code is still present in their contract and this code is exactly how all the rug pulls were done. **We have removed the following migrator code from our contract** which was forked out from Pancakeswap / Uniswap. You can see the following code is still present in pancake swap's contract and github.

Migrator code is still present in the following link
Link: https://github.com/pancakeswap/pancake-farm/blob/master/contracts/MasterChef.sol

```
163
164        // Set the migrator contract. Can only be called by the owner.
165        function setMigrator(IMigratorChef _migrator) public onlyOwner {
166            migrator = _migrator;
167        }
168
169        // Migrate lp token to another lp contract. Can be called by anyone. We trust that migrator contract is good.
170        function migrate(uint256 _pid) public {
171            require(address(migrator) != address(0), "migrate: no migrator");
172            PoolInfo storage pool = poolInfo[_pid];
173            IBEP20 lpToken = pool.lpToken;
174            uint256 bal = lpToken.balanceOf(address(this));
175            lpToken.safeApprove(address(migrator), bal);
176            IBEP20 newLpToken = migrator.migrate(lpToken);
177            require(bal == newLpToken.balanceOf(address(this)), "migrate: bad");
178            pool.lpToken = newLpToken;
179        }
180
```
